Material

The Material Tab is used to record details about the materials used to make the component. These elements are broken down in to several categories such as composition, substrate, coating and modification, depending on which are relevant to the selected implant. Each of these attributes is described in greater detail with its own Glossary entry.

Glossary

Introduction
The purpose of this glossary is to support you and clarify the new classifications of the components.

It will also support your work in achieving higher quality patient safety. In the past, most registries, including the National Joint Registry (NJR) have been incomplete in how they have addressed implants that have not performed well.

There are many variants of implants and due to how we have missed modifications of a brand that has performed well, this has lead to poorer performing brands to go unnoticed.

One example is that of the "metal on metal" devices. We learnt that "stemmed metal on metal" were listed under "hybrid". If we looked at "hybrid stems", these were good performers owing to the high performance of "metal on plastic hybrids" but this meant we actually missed the badly performing "metal on metal" devices. These caused unsafe outcomes as many patients were injured by them.

You can also upload directly from the Excel spreadsheet - mark the 'update flag' to Y for each row to be amended.

Enabling International Collaboration

- **Provision of reference, or classification data to other registers via Electronic messaging**
- **Implant look-up via Web service**
- **Component Management System**
 - Enable database to flag country specific implants
 - Multiple GTIN numbers per implant
 - Validation rules for implant upload

The Process

National Joint Registry

www.njrcentre.org.uk

Working for patients, driving forward quality

International Suppliers

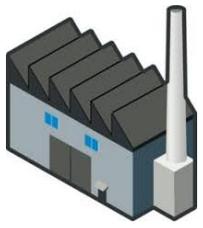

Supplier Component Upload

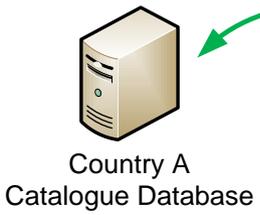

NJR Component Database

The Process

Messaging Interface

The Process

Conclusions

- NJR open to sharing a service with other registries
- Work with other registries to understand best model
- Pilot with early adopters
